SKILLS

Javascript (React)

HTML5/CSS

MySQL

Google Cloud

AWS

Unix, Git

EDUCATION

Computer Systems Technology B.S.

New York City Tech

📅 January 2008 - December 2012

CAREER OBJECTIVE

Highly motivated web developer with more than 6 years of experience in application support seeking for a position within a growing organization where I can make a positive impact. My goal is to launch a successful career as a web developer with an employer offering opportunities for professional development.

PROJECTS

Portfolio - www.darnell-portfolio.com

- Built a responsive web app that displays my recent projects & previous work.
- Web app dynamically builds each section from a public JSON file to allow for seamless site updates.
- Dynamically tracks where the user scrolls on the page to update the active section in the header.
- Used: React JS, HTML/CSS, PostMail

FGO Servant Tracker - www.mychaldea.com

- Built a full-stack web app that allows users to add servants from Fate/GO to prioritize skills & track materials based upon priority.
- Built a RESTful API service using Java Spring-Boot to handle front end requests and return a JSON.
- Utilized Firebase for user management, login, registration, etc.
- Guest Account - User: Guest@guest.com Password: password123
- Used: ReactJS, HTML/CSS, MySQL, Java, Spring-Boot, Firebase, Google Cloud

Weather App - www.d-weather.com

- Utilized a third party API to retrieve weather information based upon a location.
- Used: React JS, HTML/CSS, WeatherBit API

Character Directory - www.gameofthroneshouses.com

- Built a responsive web app that uses a third party API to receive up to date character information for Game of Thrones.
- Design of the site dynamically changes themes depending upon house selection from the user.
- Used: React JS, HTML/CSS, An API of Ice and Fire

WORK EXPERIENCE

Application Support

Credit Suisse

📅 October 2013 - July 2020

📍 New York NY

- Worked alongside the development team to resolve application errors & performed production releases for services and UI to resolve user and application issues.
- Handled ad hoc requests from traders and technical teams which varied from technical issues, enhancements, reports, etc.
